

'Grey Gum' Quartzite

Appearance	Green and Grey tones, can have a small number of orange pieces. Rustic with significant variation in colour and texture from tile to tile. Surface has veining.
Properties	Dense and durable which makes it strong and less likely to stain. Cool underfoot. Slip resistant. Thickness variation is present as the surface is split. Cuts well.
Maintenance	Minimal. Seal with penetrating sealer to make cleaning easier.
Size variation	Quartzite tiles have greater variations in thickness and squareness than most other stone tiles and we recommend they be laid with a 10-20mm grout joint.
Pricing	Mid range – slightly higher than grey granite, concrete, sandstone and porcelain.
Profile options	Tiles, bullnose edge, cobbles, random tiles.

Bullnose - 400 x 400 x 18-20mm

Custom Orders:

Other sizes available - allow 10 - 12 weeks from order.

Photo illustrates typical shade variations and imperfections found in all natural stone tiles.

GC480 Tempest Glass Mosaics have been used on the waterline of this pool. Grey Gum Quartzite has been used on the coping and surround paving.
